The Embodied Mind Cognitive Science

Cognitive science is the interdisciplinary, scientific study of the mind and its processes. It examines the nature, the tasks, and the functions of cognition (in a broad sense). Cognitive scientists study intelligence and behavior, with a focus on how nervous systems represent, process, and transform information. Mental faculties of concern to cognitive scientists include language, perception ...

Cognitive science - Wikipedia

Embodied cognition is the theory that many features of cognition, whether human or otherwise, are shaped by aspects of the entire body of the organism. The features of cognition include high level mental constructs (such as concepts and categories) and performance on various cognitive tasks (such as reasoning or judgment). The aspects of the body include the motor system, the perceptual system ...

Where the Action Is is a book by Paul Dourish slated for publication by MIT Press in October 2001. It's topic is "embodied interaction", a novel approach to the design of user interfaces and our interactive experience of computation.

Where The Action Is: The Foundations of Embodied Interaction

Highlights We show how clothes systematically influence wearers' psychological processes. Three experiments demonstrate that wearing a lab coat increases attention. Attention did not increase when the coat was not worn or associated with a painter. Attention only increased when the coat was a) worn and b) associated with a doctor. The influence of clothes thus depends on wearing them and their ...

Some authors, such as philosopher Colin McGinn and linguist Steven Pinker, think that the difficulties we experience in dealing with the hard problem of consciousness are simply due to the limitations of the human brain. This brain is the product of evolution, and, like the brains of other animals, it has its cognitive limits. For example, a human brain cannot hold 100 digits in its short-term ...

This is an excellent interview, which I will be returning to re-read. As someone who has been directly involved in research and speculation about this matter for some 20 years now, it is refreshing to see someone who can direct the force of years of independent research at what will turn out to be one of the most crucial topics in human cognitive evolution, and may supply the keys to the many ...

Philosophers who accept the idea that all laws of nature are deterministic and that the world is causally closed still cannot understand how an immaterial mind can be the cause of an action. On this view, every physical event is reducible to the microscopic motions of physical particles. The laws of biology are reducible to those of physics and chemistry.
