The Banks Of Certain Rivers

A river begins at a source (or more often several sources), follows a path called a course, and ends at a mouth or mouths. The water in a river is usually confined to a channel, made up of a stream bed between banks. In larger rivers there is often also a wider floodplain shaped by flood-waters over-topping the channel. Floodplains may be very wide in relation to the size of the river channel.

A River's Course. The course a river takes is split into three stages, the upper, middle and lower stage. In the upper stage, the river is close to its source and high above its base level (the lowest point the river can erode to 1). In the lower stage the river is far away from its source, close to the mouth and not far above its base level.
