Topology by James Munkres, 2nd Edition Solutions Manual. The main solutions manual is solutions.tex. When doing exercises it can be useful to see a list of lemmas that have been written as part of the solutions. Running the lemmas.py Python script will build lemmas_content.tex that contains these lemmas.

Munkres also does the Smirnov Metrization Theorem which relies more on paracompactness. But Kelley does Moore-Smith convergence and nets-a way of doing topology with sequences, and only gives a reference for Smirnov. The Munkres text gave a brief introduction to homotopy and the fundamental group-Kelley none.

SOLUTIONS TO EXERCISES Here are solutions to some of the problems in Munkres. There may be other, and perhaps better, ones. They are sometimes more detailed than absolutely necessary, but not excessively so. Problem 13.1. For each $x \in A$, choose an open set U_x with $x \in U_x \subseteq A$.

This text is designed to provide instructors with a convenient single text resource for bridging between general and algebraic topology courses. Two separate, distinct sections (one on general, point set topology, the other on algebraic topology) are each suitable for a one-semester course and are based around the same set of basic, core topics.

This text has a thorough introduction to topology, especially as it is related to analysis. With several exercises (complete with solutions for the Dover edition), this text provides good practice and forces the reader to work out some of the main ideas. However, as stated in the book's preface it is lacking in examples.
