The self-care movement strives to address the stresses of everyday life with simple, practical habits. Clinically, "self-care" has to do with anything someone might do for the sake of their own physical or mental health, including, for instance, eating well, exercising, or sleeping eight hours a night.

The purpose of this inquiry is to define self-deception, its potential, its functions, and the range of strategies that are employed in avoiding or distorting information that conflicts with self-perception. In doing so, we attempt a phenomenology of self-deception. Given the inherent paradox of the subject matter—the possibility that anything we bring to bear based on our own experiences might ...
