Impulse J produced from time t_1 to t_2 is defined to be $= \int$ where F is the resultant force applied from t_1 to t_2 .. From Newton's second law, force is related to momentum p by $=$ Therefore, $= \int = \int$ $= - =$ where Δp is the change in linear momentum from time t_1 to t_2 . This is often called the impulse-momentum theorem. As a result, an impulse may also be regarded as the change in ...

Densità lineare di carica. Nel caso di una distribuzione uniforme, la densità lineare di carica, indica il rapporto tra la carica distribuita su un filo, una sbarra o qualsiasi altra grandezza a simmetria unidimensionale (Q) e la sua lunghezza lungo l'ascissa curvilinea (d). In formule $=$. Si misura, considerando le grandezze nel S.I, in C/m.. Densità superficiale di carica

Dobbeltspalte-eksperimentet eller tospalte-eksperimentet er et fysikeksperiment, hvor man sender subatomare partikler eller atomare partikler (f.eks. fotoner (), atomer eller elektroner) igennem en smal spalte – og ved siden af denne spalte er der endnu en. Efter spalten, rammer fotonerne eller elektronerne en skærm, hvor man kan se et interferensmønster af vekslende lyse og mørke zoner i ...

In everyday terms, temperature is a measure of the "hotness" or "coldness" of a substance. More technically, temperature indicates the direction in which energy flows (as heat) when two objects are in thermal contact: energy flows as heat from a high temperature region to a low temperature region.
