Ah, the trials and tribulations of working in two-dimensions. If you design information displays, information graphics, or visualizations, you know that it's fairly common to use the horizontal dimension to represent each individual factor and to use the vertical dimension of a mark to indicate the level of each factor. This is something you see in a typical bar graph.

Data visualization is viewed by many disciplines as a modern equivalent of visual communication. It involves the creation and study of the visual representation of data.. To communicate information clearly and efficiently, data visualization uses statistical graphics, plots, information graphics and other tools. Numerical data may be encoded using dots, lines, or bars, to visually communicate a ...

Tufte's writing is important in such fields as information design and visual literacy, which deal with the visual communication of information. He coined the word chartjunk to refer to useless, non-informative, or information-obscuring elements of quantitative information displays. Tufte's other key concepts include what he calls the lie factor, the data-ink ratio, and the data density of a ...

Learn the difference between these two forms of data and when you should use them. Quantitative research is designed to collect cold, hard facts. Qualitative research collects information that seeks to describe a topic more than measure it.

The Difference Between Quantitative vs. Qualitative Research

There is a very annoying graph that keeps popping up in Keynote presentations. Edward Tufte invented the concept of Chart Junk. His most famous work – The Visual Display of Quantitative Information was published in 1983. It is probably the most important book ever written on data visualization.

Note that the Contrast Rating for High Ambient Light varies by almost 3 to 1 for the above Tablets. The variable range for the Motorola Xoom results from its use of Dynamic Brightness that varies with the Average Picture Level of the image content – a bad idea because it decreases both picture quality and screen visibility.

6. Summary: Users are roughly 37% faster at finding items within a list on a web page when visual indicators vary both in color and icon compared to text alone. If choosing between using color or an icon, icons with strong information scent perform better than color alone. Mobile screen space is limited, and on-the-go users are often interrupted and exhibit fragmented attention.
