Thermodynamics is the branch of physics that deals with heat and temperature, and their relation to energy, work, radiation, and properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by statistical ...

In dimensional analysis, a ratio which converts one unit of measure into another without changing the quantity is called a conversion factor. For example, kPa and bar are both units of pressure, and $100 \text{ kPa} = 1 \text{ bar}$. The rules of algebra allow both sides of an equation to be divided by the same expression, so this is equivalent to $100 \text{ kPa} / 1 \text{ bar} = 1$.
