The Spiritual Brain A Neuroscientists

Neuroscientists focus primarily on the study and research of the nervous system. The nervous system is composed of the brain, spinal cord and nerve cells. Studies of the nervous system may focus on the cellular level, as in studies of the ion channels, or instead may focus on a systemic level as in behavioural or cognitive studies. A significant portion of nervous system studies is devoted to ...

Mindfulness Can Literally Change Your Brain - hbr.org

Does evolution explain why the human brain supports religious belief? Dimitrios Kapogiannis and Jordan Grafman, scientists at the National Institutes of Health, follow up on a recent scientific paper by stating that brain networks that evolved for other purposes have given rise to our capacity for religious belief and experience.

Religion and the Brain: A Debate - Dana Foundation

The Science of Meditation. The benefits of meditation have been hard to show in concrete terms. Today, however, as the scientific world delves into the study of mindfulness, the capacity of the brain to transform under its influence inspires nothing short of wonder.

The Science of Meditation - Mindful

The meaning of spirituality has developed and expanded over time, and various connotations can be found alongside each other. Traditionally, spirituality referred to a religious process of re-formation which "aims to recover the original shape of man", oriented at "the image of God" as exemplified by the founders and sacred texts of the religions of the world.

Spirituality - Wikipedia

The August 2007 issue of DISCOVER magazine has an article entitled 10 Unsolved Mysteries of the Brain (pp. 54-61). It begins by saying: "Of all the objects in the universe, the human brain is the most complex. There are as many neurons in the brain as there are stars in the Milky Way galaxy."

The Dr. Leaf Conference - The Perfect You Conference

Whole brain synchronization occurs when the various parts of your brain begin to work together, resonating at the same frequencies and causing neural pathways to fire more rapidly. This is also sometimes referred to as “whole brain functioning” or “hemispheric synchronization”. The left and right sides of your brain begin to work in concert with each other.

Your brain is made up of billions of brain cells called neurons, which use electricity to communicate with each other. The combination of millions of neurons sending signals at once produces an enormous amount of electrical activity in the brain, which can be detected using sensitive medical equipment (such as an EEG), measuring electricity levels over areas of the scalp.
