The *Centella erecta* is smaller than either and less common. Its one leaf is shovel- or heart-shaped and the stem is attached off center. This particular wetwort used to be called *Centella asiatica* (from Asia) but geneticists say the *Centella* in the southern United States is not exactly like the *Centella* in southern Asia, but they are so close only geneticists can tell them apart, or care to.

I am a discerning flower-picker, with an understanding of what is native or invasive, abundant or rare. For example, I would perhaps cut tiger lilies I cultivated but not the wild species.

Tiger Lilies | Chestnut School of Herbal Medicine

Apricots come into season towards the end of spring in the warmer areas where they grow.; Artichokes have a second crop in the fall, but the main harvest takes place in the spring when the largest thistles are available. Look for artichokes with tight, compact leaves and fresh-cut stem ends. Arugula (aka "rocket") is a cool-weather crop. Long days and warm weather make it bolt, or flower, and ...

A Guide to Fruits and Vegetables In Season in Spring

Every few weeks a photo of a fly lands in my inbox, always accompanied by the same question: "What kind of bee is this?" The answer is simple. If your insect has short, stubby, barely visible antennae, it is not a bee.

A quick-start guide to honey bee antennae - Honey Bee Suite

There are three ways to find a plant on this blog. 1. By common name as listed in the sidebar to the left. 2. On the right sidebar you can look for the plant based on the environment it grows, season, plant type, flower color, fruit or seedpod color, use, and Geographic Location in North America.
