Welcome to Django for Beginners, a project-based approach to learning web development with the Django web framework. In this book you will build five progressively more complex web applications, starting with a simple "Hello, World" app, progressing to a blog app with forms and user accounts, and finally a newspaper app using a custom user model, email integration, foreign keys ...

Introduction | Django For Beginners

Creating a project¶. If this is your first time using Django, you'll have to take care of some initial setup. Namely, you'll need to auto-generate some code that establishes a Django project – a collection of settings for an instance of Django, including database configuration, Django-specific options and application-specific settings.. From the command line, cd into a directory where ...

Basic examples¶. Django provides base view classes which will suit a wide range of applications. All views inherit from the View class, which handles linking the view in to the URLs, HTTP method dispatching and other simple features. RedirectView is for a simple HTTP redirect, and TemplateView extends the base class to make it also render a template.
