1. Introduction. A common way of referring to the efficiency of a cooling application is to quote its coefficient of performance (COP). It may be described as the textbook method of calculating the efficiency figure for refrigeration, because textbooks, such as the one authored by Çengel and Boles (2007), use it and define it as the “desired output” over the “required input”.

Relative density, or specific gravity, is the ratio of the density (mass of a unit volume) of a substance to the density of a given reference material. Specific gravity usually means relative density with respect to water. The term "relative density" is often preferred in scientific usage.

The Atkinson-cycle engine is a type of single stroke internal combustion engine invented by James Atkinson in 1882. The Atkinson cycle is designed to provide efficiency at the expense of power density, and is used in some modern hybrid electric applications.. The original Atkinson-cycle piston engine allowed the intake, compression, power, and exhaust strokes of the four-stroke cycle to occur ...
