"Endlessly stimulating, a marvelous overview, and one which only a deeply musical neuroscientist could give. Daniel Levitin has a huge knowledge of music developed since the 1950s (and of Blues, Jazz, and etc. before this), and not merely a formal but a deep personal knowledge as an expert performer no less than as a listener.

A brain-computer interface (BCI), sometimes called a neural-control interface (NCI), mind-machine interface (MMI), direct neural interface (DNI), or brain-machine interface (BMI), is a direct communication pathway between an enhanced or wired brain and an external device. BCI differs from neuromodulation in that it allows for bidirectional information flow.

Humans do have a form of RAM and it is called short-term memory. Interestingly, short-term memory is usually associated with a very specific region of the brain called the hippocampus. Short-term memory is the memory you will use to recall immediate actions (like the series of words you are actually reading).

Repeated consumption of porn causes the brain to literally rewire itself. It triggers the brain to pump out chemicals and form new nerve pathways, leading to profound and lasting changes in the brain. Believe it or not, studies show that those who consume pornography more frequently have brains that ...

"There is no such thing as an average human being. If you have a normal brain, you are superior. There's almost nothing that you can't do." When Benjamin Carson was in fifth grade, he was considered the "dummy" of his class. His classmates and teachers took it for granted that Ben would take an entire quiz without getting a single question right.
