HHT is highly penetrant; in a series of 384 patients, Plauchu et al. (1989) found at least 1 manifestation in 97%, while Porteous et al. (1992) found complete penetrance by 40 years of age in a series of 35 British families with 98 affected members. Sixty-two percent of these were clinically affected by age 16, with epistaxes being the presenting feature in 90% of cases.
