Overview. The second day begins with the reconnaissance and mapping phases of a web app penetration test. Reconnaissance includes gathering publicly available information regarding the target application and organization, identifying the machines that support our target application, and building a profile of each server, including the operating system, specific software, and configuration.

Web Penetration Testing: What It Is. Web Penetration Testing is as the name suggests, a penetration test that focuses solely on a web application rather than a network or company. The underlying concept and objectives for discovering security weakness and strengthening defense mechanisms are the same.

### **Web Penetration Testing - Pentest Geek**

A security hacker is someone who explores methods for breaching defenses and exploiting weaknesses in a computer system or network. Hackers may be motivated by a multitude of reasons, such as profit, protest, information gathering, challenge, recreation, or to evaluate system weaknesses to assist in formulating defenses against potential hackers. The subculture that has evolved around hackers ...
