In Python, a function is a named sequence of statements that belong together. Their primary purpose is to help us organize programs into chunks that match how we think about the solution to the problem. You can make up any names you want for the functions you create, except that you can't use a ...

I knew the book Think Python by Allen Downey, which contains all the key ingredients to learn to program properly. However, this book was based on the Python programming language. My first draft of the course notes was a melting pot of all kinds of reference works, but the longer I worked on it, the more the content started to resemble the chapters of Think Python.

Signs that you are a mediocre programmer 1. Inability to think in sets. Transitioning from imperative programming to functional and declarative programming will immediately require you to think about operating on sets of data as your primitive, not scalar values. The transition is required whenever you use SQL with a relational database (and not as an object store), whenever you design programs ...
