The exploratory factor analysis produced a seven-factor solution that accounts for 70% of the variation in the data. Table 1 reports the variables included in each of the seven dimensions of dog companionship that emerged, along with associated reliabilities. The coefficient alphas for all seven dimensions are greater than the 0.6 cutoff score suggested by Nunnally (1978) for exploratory research.

Dog behavior is the internally coordinated responses of individuals or groups of domestic dogs to internal and external stimuli. It has been shaped by millennia of contact with humans and their lifestyles. As a result of this physical and social evolution, dogs, more than any other species, have acquired the ability to understand and communicate with humans and they are uniquely attuned to ...

Other Dogs. If your 5-pound Yorkshire Terrier decides to bark and growl at another dog while you

are walking down the street, or as another dog passes by your house, it's almost seen as cute, because you see it as your tiny dog thinking it is a big dog. However, if your 120-pound Akita barks and growls at another dog, the Akita is more likely to be put in its place and told to stop.
