Thermodynamics is the branch of physics that deals with heat and temperature, and their relation to energy, work, radiation, and properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by statistical ...

In thermodynamics, a critical point (or critical state) is the end point of a phase equilibrium curve. The most prominent example is the liquid-vapor critical point, the end point of the pressure-temperature curve that designates conditions under which a liquid and its vapor can coexist. At higher temperatures, the gas cannot be liquefied by pressure alone.

Heat pipes are recognised as one of the most efficient passive heat transfer technologies available. A heat pipe is a structure with very high thermal conductivity that enables the transportation of heat whilst maintaining almost uniform temperature along its heated and cooled sections.

La vitesse du son ou célérité du son est la vitesse de propagation des ondes sonores. L'étude de la propagation du son dans l'air s'est étendue à d'autres milieux, gazeux, liquides ou solides. On parle de vitesse du son dans toute sorte de matériaux où nulle oreille ne peut l'entendre, dès lors qu'une vibration s'y transmet.
