Chapter 16 Evolution Of Populations Vocabulary Review

In biology, evolution refers to genetic change in species or populations over time. Evolution usually refers to a process that produces a better or more complex form. In biology, it is the natural process by which animals and plants develop from their original or primitive state to their modern or specialized state.

evolution - Dictionary Definition : Vocabulary.com

Chapter 16 Evolution of Populations 16-1 Genes and Variation Darwin's original ideas can now be under-stood in genetic terms. Beginning with variation, we now know that traits are con-trolled by genes and that many genes have at least two forms, or alleles. We also know that individuals of all species are heterozy-gous for many genes.

Chapter 16 Evolution of Populations Summary

For many animals, gene flow occurs when individuals move between populations. Gene flow can occur in fungi and plant populations when spores or seeds are spread to new areas. Gene flow increases the genetic variation of the receiving population. Gene flow between neighboring populations keeps their gene pools similar.

11.1 genetic Variation Within Populations 7C, 7E, 7f

Chapter 23 The Evolution of Populations Lecture Outline . Overview: The Smallest Unit of Evolution. One common misconception about evolution is that organisms evolve, in a Darwinian sense, during their lifetimes. Natural selection does act on individuals.
