Statistical mechanics is one of the pillars of modern physics. It is necessary for the fundamental study of any physical system that has a large number of degrees of freedom. The approach is based on statistical methods, probability theory and the microscopic physical laws. It can be used to explain the thermodynamic behaviour of large systems. This branch of statistical mechanics, which treats ...

Solved Problem. Question 1: Lithium cannot be kept in Kerosene other like alkali metals e.g. Na,K etc- Why? Solution: This is because it floats to the surface of kerosene due to its low density and is usually wrapped in paraffin wax. Question 2: The chemistry of Lithium is very much similar to that of magnesium even though they are placed in different groups - Explain.

For these problems, it is important that the sample sizes be sufficiently large to produce meaningful results. The product of the sample size n and the probability p of the event in question occurring must be greater than or equal to 10, and similarly, the product of the sample size and one minus the probability of the event in occurring must also greater than or equal to 10.

Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...
