Verdigris is the common name for a green pigment obtained through the application of acetic acid to copper plates or the natural patina formed when copper, brass or bronze is weathered and exposed to air or seawater over time. It is usually a basic copper carbonate ($\text{Cu}_2\text{CO}_3(\text{OH})_2$), but near the sea will be a basic copper chloride ($\text{Cu}_2(\text{OH})_3\text{Cl}$). If acetic acid is present at the time of ...

Verdigris - Wikipedia

Like the LightSpeed and iFi's Gemini, the Curious USB cable's geometry is based on a physical separation of data and power. The thinner copper-coloured line on the Curious carries the voltage and beneath the white-striped black sheath sits data+ and data-; yes, USB data transmission is a balanced affair.

Curious for the curious: a knockout USB cable from Australia

It is very simple if you explain it properly copper absorbs heat much better than aluminum and higher absorption equal more retention also so you have a dilemma you get the heat into copper but need to get rid of it fast so that it can continue to absorb from the cpu and it is known that copper will transfer to aluminum better than to air and aluminum will transfer to air very easily.
