A Note On Feeding Invertebrate Prey... Know your reptile and amphibian. If they are not killing the prey before eating it (such as by vigorous chewing along the length of the prey or crushing it against the ground or furnishings) then you may need to do some disabling yourself.

Housing and Feeding Invertebrate Prey - Anapsid

Biology. The three species in this genus of New World mice are only distantly related to the common house mouse, *Mus musculus*. They are endemic to the United States and Mexico. The southern grasshopper mouse has around a 3.5 to 5.0 inches (8.9–12.7 cm) long body and a tail that is generally 1.0 to 2.5 inches (2.5–6.4 cm) long. Its behavior is rather distinct from other mice.

Swarm Attack. Creatures with the swarm subtype don't make standard melee attacks. Instead, they deal automatic damage to any creature whose space they occupy at the end of their move, with no attack roll needed. Swarm attacks are not subject to a miss chance for concealment or cover. A swarm's statistics block has "swarm" in the Attack and Full Attack entries, with no attack bonus given.

Sundew: Sundew, (genus Drosera), any of the approximately 152 carnivorous plant species of the genus Drosera (family Droseraceae). Sundews are widely distributed in tropical and temperate regions, especially in Australia, and are common in bogs and fens with sandy acidic soil. Predominantly perennials, the

Sundew | plant | Britannica.com

In the common, non-taxonomic sense of the term, carnivore is any animal with a diet consisting wholly or mainly of animal matter, whether it comes from animals living (predation) or dead (scavenging). The term is in contrast to herbivore, which refers to animals with a diet wholly or mainly of plant matter, and omnivore, which refers to animals that consume both animal and plant matter.
