The XY sex-determination system is the sex-determination system found in humans, most other mammals, some insects (), some snakes, and some plants (). In this system, the sex of an individual is determined by a pair of sex chromosomes. Females have two of the same kind of sex chromosome (XX), and are called the homogametic sex. Males have two different kinds of sex chromosomes (XY), and are ...

Cetaceans' reproductive organs are located inside the body. Male cetaceans (whales, dolphins, and porpoises) have two slits, the genital groove concealing the penis and one further behind for the anus. Cetaceans have fibroelastic penises, similar to those of Artiodactyla. The tapering tip of the cetacean penis is called the pars intrapraeputialis or terminal cone.

early development and nutrition of the embryo. The sexual dimorphism in gamete size is echoed in many other traits of adults and has resulted in the evolution of different male and female reproductive strategies. Sexual reproduction is widespread in almost all groups of multicellular organisms, but the reasons for its evolution and prevalence are not well known.

Kegel Exercises for Men are used to strengthen the PC or pubococcygeus muscle, just as they are for women. The muscle is similar in both men and women, stretching from the pubic bone to the tail bone and forming a hammock-like floor that supports the organs of the pelvis and contributes to the function of the sphincter muscles.
