The Physics Of Consciousness Quantum

The nature of consciousness remains deeply mysterious and profoundly important, with existential, medical and spiritual implication. We know what it is like to be conscious – to have awareness, a conscious ‘mind’, but who, or what, are ‘we’ who know such things? How is the subjective nature of phenomenal experience – our ‘inner life’ – to be explained in scientific terms?

Quantum mechanics reveals a mystery at the boundary of physics: that observation strangely influences what is observed. Quantum Enigma focuses on this increasingly discussed skeleton in physics’ closet, its encounter with consciousness.. Quantum Enigma’s treatment is understandable without prior physics background. An American Journal of Physics review says: “...Rosenblum and Kuttner ...

The quantum mind or quantum consciousness group of hypotheses propose that classical mechanics cannot explain consciousness. It posits that quantum mechanical phenomena, such as quantum entanglement and superposition, may play an important part in the brain's function and could contribute to form the basis of an explanation of consciousness.. Hypotheses have been proposed about ways for quantum ...

Now let’s link the knower to the quantum field of consciousness. If the observer is a field of consciousness and thus has the potential to become particles (matter) once it is observed, consciousness can therefore express itself in material form as the particles concentrate into, say, a human being or a tree. 3,4 When the knower (field of consciousness) observes itself, the knower becomes the ...

In physics and cosmology, digital physics is a collection of theoretical perspectives based on the premise that the universe is describable by information. It is a form of digital ontology about the physical reality. According to this theory, the universe can be conceived of as either the output of a deterministic or probabilistic computer program, a vast, digital computation device, or ...

The commonly-misunderstood observer effect is used by many to claim that human consciousness *creates* our reality, rather than merely perceives an objective universe.

But not so long ago, the scientist turned his attention to physics, quantum mechanics and astrophysics. This explosive mixture has given birth to the new theory of biocentrism, which the professor has been preaching ever since.. The theory implies that death simply does not exist. It is an illusion which arises in the minds of people. It exists because people identify themselves with their body.
