The growth of human hair occurs everywhere on the body except for the soles of the feet, the lips, palms of the hands, some external genital areas, the navel, scar tissue, and, apart from eyelashes, the eyelids. Hair is a stratified squamous keratinized epithelium made of multi-layered flat cells whose rope-like filaments provide structure and strength to the hair shaft.

Food and Halloween props have something in common - a large part of success is the presentation. So it's a natural combination. For my 2005 Halloween party I hosted a creepy supper - everything was guaranteed 100% edible and tasty (in other words, 100% "real food") but those with weak constitutions might find out just how much the presentation affects their perception of food...
