The wildcat is a species complex comprising two small wild cat species, the European wildcat (*Felis silvestris*) and the African wildcat (*F. lybica*).The European wildcat inhabits forests in Europe and the Caucasus, while the African wildcat inhabits semi-arid landscapes and steppes in Africa, the Arabian Peninsula, Central Asia, into western India and western China.

Wildcat - Wikipedia

A feral cat is an un-owned domestic cat (*Felis catus*) that lives outdoors and avoids human contact: it does not allow itself to be handled or touched, and usually remains hidden from humans. Some feral cats may become more comfortable with people who regularly feed them, but even with long-term attempts at socialization they usually remain fearful. ...

The Mourning Doves Coo may sound sad, but bird watchers know that it signals the beginning of this birds habits of nesting, claiming territory, and raising young.. It always amazes me where a bird may decide to build a nest and these birds are no exception. As you can see, this one used an old Robin nest on top of the security lights at the back of this house. Two healthy squabs were raised

Carnivore numbers are limited by food, larger predators, or disease. When human influence removes larger predators, many of the smaller carnivores become extremely abundant, creating an ideal environment for the spread of infection. The disease of most concern to humans is rabies, which is transmitted in saliva via bites. Rabies is most common in the red fox, striped skunk, and raccoon, but it ...
