Turbulent Flow. In fluid dynamics, turbulent flow is characterized by the irregular movement of particles (one can say chaotic) of the fluid. In contrast to laminar flow the fluid does not flow in parallel layers, the lateral mixing is very high, and there is a disruption between the layers. Turbulence is also characterized by recirculation, eddies, and apparent randomness.

### Turbulent Flow Definition - What is Nuclear Power

Drag Force – Drag Equation. The drag force,  $F_D$ , depends on the density of the fluid, the upstream velocity, and the size, shape, and orientation of the body, among other things. One way to express this is by means of the drag equation. The drag equation is a formula used to calculate the drag force experienced by an object due to movement through a fluid.

The chemical elements can be broadly divided into metals, metalloids and nonmetals according to their shared physical and chemical properties. All metals have a shiny appearance (at least when freshly polished); are good conductors of heat and electricity; form alloys with other metals; and have at least one basic oxide. Metalloids are metallic-looking brittle solids that are either ...

The vision of the Department of Mechanical Engineering, National Institute of Technology Silchar is as follows: To envisage an ambience of excellence, inspiring value based education, research and development in Mechanical Engineering with a commitment to train students with world-class competency and cutting-edge proficiency to face challenges of global market with confidence;

### M.E. Dept. | NIT Silchar

Values of A, B, and C for several compounds are reported in the literature [5]. Complex vapor pressure equations such as presented by Wagner [5], even though more accurate, should be avoided because they can not be used to extrapolate to temperatures beyond the critical temperature of each component.
