In physiology, sensory transduction is the conversion of a sensory stimulus from one form to another. Transduction in the nervous system typically refers to stimulus-alerting events wherein a physical stimulus is converted into an action potential, which is transmitted along axons towards the central nervous system for integration. It is a step in the larger process of sensory processing.

INTRODUCTION. The regulation of acid and pepsin secretion reflects an intricate balance of chemotransmitters delivered to the gastric mucosa by several pathways that mediate both stimulatory and inhibitory mechanisms []. Similarly, several mechanisms contribute to the remarkable ability of normal gastroduodenal mucosa to defend itself against injury from the acid/peptic activity in gastric ...
