1. Describe the phases of clinical trials? Ans:- These are the following four phases of the clinical trials: Phase 1: Test a new drug or treatment to a small group of people (20-80) to evaluate its safety. Phase 2: The experimental drug or treatment is given to a large group of people (100-300) to see that the drug is effective or not for that treatment.

When given a system of linear equations, you can find their point of intersection via matrices. When it would take hours for a person to solve a many-variable system with substitution, it takes, at most, a couple of minutes with matrices. Matrices should not be your default method of solving systems, since other methods might be faster than typing the matrices into your calculator.
