IBWorldme is a resource site for the 2016 IB Biology curriculum. Review notes for topic 5 Evolution and Biodiversity for higher and standard level IB (International Baccalaureate) Biology)

Topic 5 Review Notes IB Biology Evolution Biodiversity

Evolution: Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. It is one of the keystones of modern biological theory.

evolution | Theory, Examples, & Facts | Britannica.com

Evolution of the atmosphere: Evolution of the atmosphere, the development of Earth's atmosphere across geologic time. The process by which the current atmosphere arose from earlier conditions is complex; however, evidence related to the evolution of Earth's atmosphere, though indirect, is abundant. Ancient sediments and rocks

Evolution Library: Topic Page - PBS

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

Many researchers have found the evolution of the eye attractive to study, because the eye distinctively exemplifies an analogous organ found in many animal forms. Simple light detection is found in bacteria, single-celled organisms, plants and animals. Complex, image-forming eyes have evolved independently several times.

No discussion of evolution seems complete without bringing up the topic of the human eye. Despite its deceptively simple anatomical appearance, the human eye is an incredibly complicated structure. Even in this age of great scientific learning and understanding, the full complexity of the human eye has yet to be fully understood.

The Evolution of the Human Eye - detectingdesign.com

Misconceptions about evolutionary theory and processes. MISCONCEPTION: Evolution is a theory about the origin of life. CORRECTION: Evolutionary theory does encompass ideas and evidence regarding life's origins (e.g., whether or not it happened near a deep-sea vent, which organic molecules came first, etc.), but this is not the central focus of evolutionary theory.

This article explores the hypothesis that key human adaptations evolved in response to environmental instability. This idea was developed during research conducted by Dr. Rick Potts of the Smithsonian's Human Origins Program. Natural selection

Climate Effects on Human Evolution | The Smithsonian ...

Darwin and Natural Selection. Most educated people in Europe and the Americas during the 19th century had their first full exposure to the concept of evolution through the writings of Charles Darwin. Clearly, he did not invent the idea. That happened long before he was born. However, he carried out the necessary research to conclusively document that evolution has occurred and then made the ...
