If an air bubble is not removed from the tip of the burette before the titration begins it may be moved by the flow of the sulfuric acid out of the burette during one of the titrations. A different volume of acid will be used in this titration than measured so the titres may be inconsistent leading to an incorrect calculated acid concentration.

When used as a short term therapy, these drugs are both safe and effective for most people. If the drug is used longer than this short term "safe period," a condition known as rebound congestion or Rhinitis Medicamentosa (RM) can occur. The only way to relieve rebound congestion is to administer another dose of the nasal spray.
