TOUCH RECEPTORS. While not often regarded as an organ by everyday people, your skin is actually the largest organ of your body. It contains five different types of touch receptors in your skin, each responsible for a different type of signal or group of signals, to update your brain on the status of its largest organ.

How Your Sense of Touch Works - Plasticity Brain Centers

Your skin contains tiny nerve endings that create your sense of touch. When you experience sensations such as pain or heat or cold, or feel things that are soft or sticky or sharp, the bottom layer of your skin, called the dermis, sends messages to your brain about the sensation.

Book review: Touching a Nerve | New Humanist

The somatosensory system is a part of the sensory nervous system. The somatosensory system is a complex system of sensory neurons and pathways that responds to changes at the surface or inside the body. The axons (as afferent nerve fibers), of sensory neurons connect with, or respond to, various receptor cells.

Somatosensory system - Wikipedia

Healthy vagus nerve communication between your gut and your brain helps to slow you down like the brakes on your car by using neurotransmitters such as acetylcholine and GABA. These neurotransmitters literally lower heart rate, blood pressure, and help your heart and organs slow down so that you can rest-and-digest.

How Does the Vagus Nerve Convey Gut Instincts to the Brain ...
