Thermal radiation, also known as heat, is the emission of electromagnetic waves from all matter that has a temperature greater than absolute zero. It represents a conversion of thermal energy into electromagnetic energy. Thermal energy consists of the kinetic energy of random movements of atoms and molecules in matter.

Thermal radiation is radiation that things make because they are warm. It may be felt as heat or seen as light. It is a form of heat transfer that is moved from one place to another by electromagnetic radiation waves or rays. It does not require a form of matter to be transferred.. For example a person in front of a fire can warm up because of the light of the fire, even if the air is cold.
