Definition. Dissociative identity disorder (DID) is a severe condition in which two or more distinct identities, or personality states, are present in—and alternately take control of—an individual. Some people describe this as an experience of possession. The person also experiences memory loss that

is too extensive to be explained by ordinary forgetfulness.

### **Dissociative Identity Disorder (Multiple Personality ...**

Dissociative Disorders. The symptoms of a dissociative disorder usually first develop as a response to a traumatic event, such as abuse or military combat, to keep those memories under control. Stressful situations can worsen symptoms and cause problems with functioning in everyday activities.
