Kinetic energy is the energy of motion. An object that has motion - whether it is vertical or horizontal motion - has kinetic energy. There are many forms of kinetic energy - vibrational (the energy due to vibrational motion), rotational (the energy due to rotational motion), and translational (the energy due to motion from one location to another).

Convection is the heat transfer due to the bulk movement of molecules within fluids such as gases and liquids, including molten rock (). Convection includes sub-mechanisms of advection (directional bulk-flow transfer of heat), and diffusion (non-directional transfer of energy or mass particles along a concentration gradient).

Elastic Potential Energy. The second form of potential energy that we will discuss is elastic potential energy. Elastic potential energy is the energy stored in elastic materials as the result of their stretching or compressing. Elastic potential energy can be stored in rubber bands, bungee chords, trampolines, springs, an arrow drawn into a bow, etc.

How do greenhouse gases affect the climate? Explore the atmosphere during the ice age and today. What happens when you add clouds? Change the greenhouse gas concentration and see how the temperature changes. Then compare to the effect of glass panes. Zoom in and see how light interacts with molecules. Do all atmospheric gases contribute to the greenhouse effect?

The Space Shuttle orbiter is the spaceplane component of the Space Shuttle, a partially reusable orbital spacecraft system that was part of the Space Shuttle program. Operated by NASA, the U.S. space agency, this vehicle could carry astronauts and payloads into low Earth orbit, perform inspace operations, then re-enter the atmosphere and land as a glider, returning its crew and any onboard ...

Hello, As you all know, if a crystal contains a phonon of frequency [itex]\omega[/itex], it means that the fourier decomposition of the physical vibration of that crystal lattice contains a plane wave of frequency [itex]\omega[/itex], and the more phonons of a given frequency, the bigger the amplitude of that component.

How can a phonon be localized? A meaningless concept? Yet ...

This started with a tweet. I'm embarrassed how often that happens. Frustrated by a sense of global mispriorities, I blurted out some snarky and mildly regrettable tweets on the lack of attention to climate change in the tech industry (Twitter being a sublime medium for the snarky and regrettable). Climate change is the problem of our time, it's everyone's problem, and most of our problem ...

What can a technologist do about climate change? A ...
