Munkres also does the Smirnov Metrization Theorem which relies more on paracompactness. But Kelley does Moore-Smith convergence and nets-a way of doing topology with sequences, and only gives a reference for Smirnov. The Munkres text gave a brief introduction to homotopy and the fundamental group-Kelley none.

Topology at Columbia University has enjoyed a long tradition. Illustrious professors from the past include Samuel Eilenberg, who is responsible for the foundations of algebraic topology, and Lipman Bers, whose ideas in complex variables played an influential role in Thurston's program for three-dimensional manifolds.
