Algebraic and Number Theoretic Algorithms Algorithm: Factoring Speedup: Superpolynomial Description: Given an n-bit integer, find the prime factorization.The quantum algorithm of Peter Shor solves this in $\widetilde{O}(n^3)$ time [82,125].The fastest known classical algorithm for integer factorization is the general number field sieve, which is believed to run in time $2^{\widetilde{O} ...$

Background. The halting problem is a decision problem about properties of computer programs on a fixed Turing-complete model of computation, i.e., all programs that can be written in some given programming language that is general enough to be equivalent to a Turing machine. The problem is to determine, given a program and an input to the program, whether the program will eventually halt when ...
