In optics, the exit pupil is a virtual aperture in an optical system. Only rays which pass through this virtual aperture can exit the system. The exit pupil is the image of the aperture stop in the optics that follow it. In a telescope or compound microscope, this image is the image of the objective element(s) as produced by the eyepiece.The size and shape of this disc is crucial to the ...

Misc. Notes: In single-user mode, the shell behaves a little differently than normal (more so under earlier versions of OS X). For one thing, the default shell may be different (zsh under 10.0-10.2, bash under 10.3); unless you're extremely familiar with the peculiarities of your regular shell, you probably won't notice this (except that the shell prompt'll be different from normal).
