Data Warehouse and Business Intelligence Concepts

A data warehouse (or enterprise data warehouse) stores large amounts of data that has been collected and integrated from multiple sources. Because organizations depend on this data for analytics or reporting purposes, the data needs to be consistently formatted and easily accessible – two qualities that define data warehousing and makes it essential to today's businesses.

IBM Business Analytics can help you mitigate risks and increase operational efficiency in all areas of your business. After adopting our easily consumable analytics cycle, you can be confident that you're making the right decisions and taking the right actions to drive your business forward.

Business Analytics | IBM

A dimension is a structure that categorizes facts and measures in order to enable users to answer business questions. Commonly used dimensions are people, products, place and time.. (Note: People and time sometimes are not modeled as dimensions). In a data warehouse, dimensions provide structured labeling information to otherwise unordered numeric measures.

5. Agile Architecture at Scale. On large agile teams, geographically distributed agile teams, or for enterprise-wide architectural efforts, you will require an Architecture Owner team or Enterprise Architecture team (in Agile Modeling I originally called this a core architecture team, a term I never really liked). Large agile teams are often organized into smaller subteams, as you can see in ...
